

Code Preparation

Step 1

(Player.java)

Add the lines

```
package student_submissions;  
import game_utils.Player;
```

At the very top of the Player.java file. It should be the first thing in that file.

Step 2

(Player.java)

Rename the class to something distinct — e.g.

```
public class Firstname_Lastname_date {  
    ...  
}
```

May need to change the constructor name as well.

Step 3

Upload the file along with others in the student_submissions folder.

Tournament code: <https://github.com/gyang0/Connect-4-Competition>

Probably a good idea to run Main.java to test the code before using it in class.
